

Network Infrastructure Control

The Building Blocks of the Network

Infoblox Benefits

- Up to 50% reduction in network capital and operational expenses
- Up to 80% increase in network availability
- Enhanced uptime and application performance
- Automated network change and configuration management
- Built-in compliance and policy reporting

More than 4,000 organizations, including the world's top 12 largest banks, 3 of the largest retailers, and 6 of the world's largest manufacturers are using Infoblox to make their networks more available, more economical and more dynamic.

DNS, DHCP and IP Address Management Made Easy

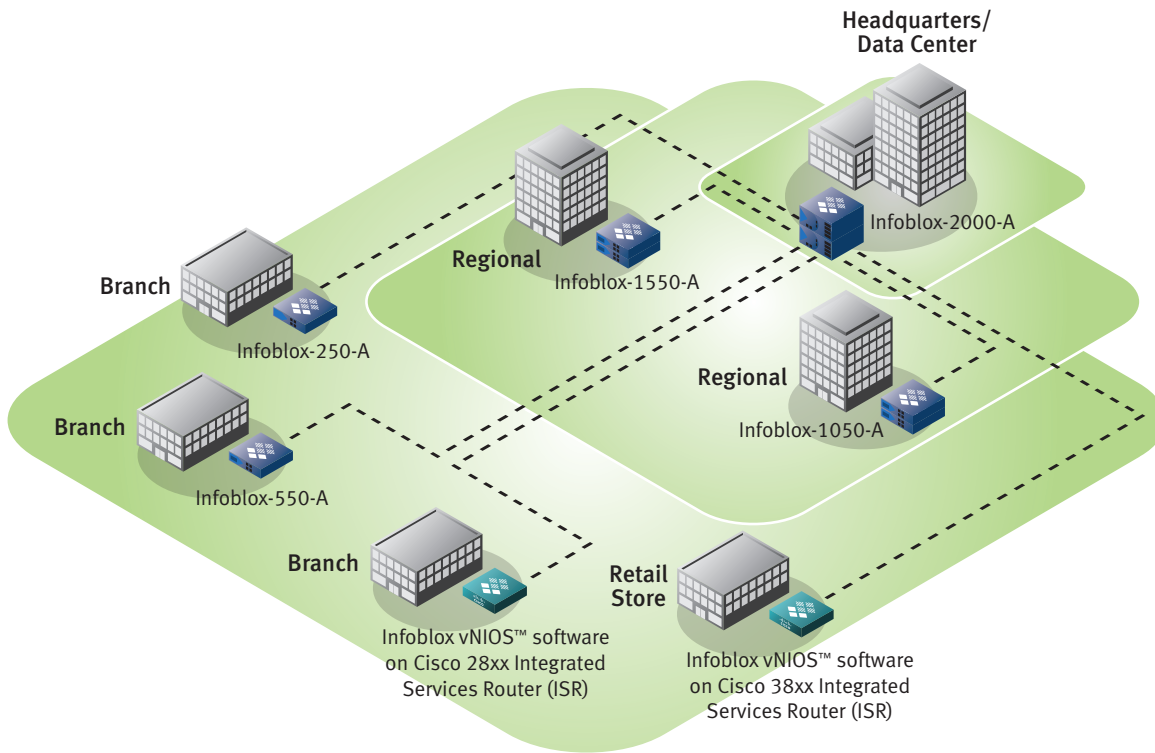

With Infoblox you can reduce the capital and operating costs of your network by up to 50%, while boosting availability and application performance. By automating the delivery and management of network services like DNS, DHCP and IP address management, Infoblox customers consolidate servers and eliminate layers of complex, error-prone network tasks that drive up costs and jeopardize availability.

Infoblox Appliance Family (top to bottom)
250-A, 550-A, 1050-A, 1550-A/1552-A, 1852-A and 2000-A

Hardened Appliances and Grid™ Technology Eliminate Risk

Infoblox appliances provide a platform for delivering reliable, scalable, and secure network services including IPAM, DNS, DNSSEC, DHCP and more. Simply put: DNS/DHCP servers can go down. And when they do, your business stops. Infoblox eliminates that risk with hardened appliances that run on patented Grid™ technology that provides high availability and ensures continuous business uptime. This is why the world's most critical networks run on Infoblox.

The Resilient and Powerful Infoblox Grid™

Automate Network Change & Configuration Management

80% of network problems are due to people making changes. Infoblox enables you to take control of network configurations and changes—making it easy to identify hard-to-find problems. See who is changing, what, where, and when. Hundreds of built-in rules, compliance reports and policies identify problems automatically and proactively, so you can focus on what's important.

1. Understand the impact of changes to network health and policy
2. Enforce internal standards and regulatory compliance mandates automatically
3. Improve staff efficiency by reducing manual tasks, verifying configurations and remediating issues faster

Visually See the Impact of Change to the Health, Policy, and Stability of Your Network

Appliance-Based Network Services Delivery

- Highly available, robust and secure IPAM, DNS, DNSSEC, DHCP, TFTP, HTTP & more
- Centralized administration, monitoring and troubleshooting
- System-wide one-click upgrades and Disaster Recovery
- Virtual appliances for leading network equipment platforms

Real-Time IT Orchestration

- High performance, high availability server for IF-MAP
- Standards-based integration of data from multiple systems and vendors
- Supports enhanced network security, data center automation, compliance supply chain management, smart grid, and more

Next Generation IP Address Management

- Automate everyday tasks (e.g. moving printers, adding DNS records, monitoring and reporting, etc.)
- Simplify and delegate with role-based administration and workflow
- Organize networks to simplify viewing and management
- Integrate and customize using rich API and bloxTools™ environment

Automated Network Change & Configuration Management

- Proactively identify network problems before end users are impacted
- Reduce tedious, manual tasks
- Consistently meet internal policies and external regulatory compliance mandates

“Since deploying Infoblox, we have seen a tenfold reduction in administration time and significantly increased security of our external DNS systems.”

Howard Hutchings, Vice President of Global Infrastructure, Heidelberg Printing Company

“We have had flawless performance since we implemented the Infoblox solution.”

Shawn Griffin, Group Manager, Network Services Data Delivery, Fifth Third Bank

“With our business dependence on the network, failure is not acceptable. The Infoblox solution has given Rooms to Go a strong, secure, highly available and affordable solution.”

Jason Hall, IT Manager at Rooms to Go
